

CINS 465 - Final proposal write up

I'm making a website for my friend Sydney's animal sticker business. The website is going to allow a person to make an account, upload a photo of their pet and use the Pay-pal to pay for a sticker to be hand drawn. Once the sticker is drawn Sydney can log in and add the photo to the original so when the user visits the website they can click on the photo and see the finished sticker before the it gets made and sent to their house.

User info:

- name
- password
- email
- address
- pet photo
- spot for pet drawing

Pages

Address	Description
“”	main photo page
“login/”	login page
“signup/“	sign up page
“upload/“	upload an image and paypal

Timeline

- clean up project i've been working on for previous projects
- use on docker
- Add top bar for logging in and uploading
- add users
 - only users can upload image
- allow only super user to upload drawing to photos
- clicking on image switches between them
- Style with CSS
- put on google cloud

stretch goals

- full page image view
 - has comments
 - has the two photos side by side
 - has re-order button that links to new PayPal interaction
- have upload and login pop up on the main screen making it a one page website
